- **Others:** Git
- **Relative Application:** Webstorm, Visual Studio Code, TextPad 8, PuTTY(SSH)

PROJECT EXPERIENCE (details in Homepage)

Movie Wiki Dynamic Web Server

Mar 2018 - Apr 2018

- (group project) This project includes a web server to interact with an SQL database and a web pages that access to the server.
- In this project, I was mainly in charge of handling requests in the server, creating interaction between server and database, formatting the callback data, and filters function at the web sites. (GitHub repository: <https://github.com/EmilyMeuer/movieWiki>)
- After the project, I built my own server through AWS' EC2 virtual machine, and improve the efficiency on the server side. (<http://www.vincesmoviewiki.com/>) (Github Repository)

Space Ships Multi-players Web Video-game

Apr 2018 - May 2018

- (group project) This project includes a web server with using socket.io to pass data between server and clients and a web site with the simple video-game which is built by Phaser 3.
- I was mainly in charge of socket.io connections and the combination of socket.io and function in games
- Github Repository: <https://github.com/vincentlee9512/web-videogame>

Air Quality Detector Web App

Feb 2018 - Mar 2018

- This project used 2 external APIs to retrieve data from [Google Maps](#) and [Open AQ Platform](#). This project also used Angular.js and bootstrap to make the application more responsive.
- In this project, I was mainly in charge of retrieving data from both APIs, formatting the data for displaying, and filter functions.
- Link to the web app: <https://vincentlee9512.github.io/AQwebapp/>
- Github Repository: <https://github.com/vincentlee9512/AQwebapp>
